

CRADLE IN CAR FOR INFANT

(Patent Apln. No.3534/MUM/2010)

A cradle fixes on a front seat has provision to keep it on front or back side of front seat. While the parent drives with the infant the view of the child will be always in front without turning face to side. The cradle could fix behind the front seat while the parents are seated on rear seat and it could slide towards left and right or fix in between them. The cradle has sufficient shock absorber and provision for swinging and the child enjoy the ride without causing any jerk or bump.

Presently parent carry the infant in their arm or lap or fastened in baby seat behind, which is inconvenient to driving parent.
